Our research focuses on flowering plants from Europe, South-East Asia, and South America and on fungi, lichens, and algae worldwide with a number of national and international [projects](#). Research products include taxonomic revisions, floristic projects, vegetation surveys, molecular phylogenetics, and biodiversity informatics. The Botanische

Staatssammlung is an active member of the international network of herbaria, and each year we send on loan more than 5,000 specimens.

Botanische Staatssammlung & LMU

The Botanische Staatssammlung is linked to the Ludwig-Maximilians-Universität through research and teaching and through its director, Gudrun Kadereit, who is on the Faculty of Biology, Section [Systematics, Biodiversity & Evolution of Plants](#). It is also linked to the Botanischer Garten München-Nymphenburg on whose ground the herbarium building is located and to the Bayerische Botanische Gesellschaft (Bavarian Botanical Society) whose library and herbarium we are hosting.

[Botany Seminars](#): A joint seminar of the LMU, Section Systematics, Biodiversity & Evolution of Plants, the Botanische Staatssammlung München and the Botanical Garden München-Nymphenburg.

Botany and Mycology in München-Nymphenburg

- [Botanischer Garten München-Nymphenburg](#)
- [Ludwig-Maximilians-Universität: Systematics, Biodiversity and Evolution of Plants](#)
- [Bayerische Botanische Gesellschaft](#)

Visiting

The library and herbarium of the Bavarian State Collection for Botany are open again by appointment. Please note the 2G rule: Only vaccinated and recovered persons have personal access. Wearing an FFP2 mask is mandatory.
